

Zimbabwe Program Highlights

Cervical cancer is the number one cancer killer of women in sub-Saharan Africa, with roughly 110,000 women diagnosed annually; of these women, about 66% will die from the disease. Women living with HIV (WLHIV) are up to six times more likely to develop persistent precancerous lesions and progress to cervical cancer, often with more aggressive forms and higher mortality.

Launched in May 2018 to address this challenge, Go Further is an innovative public-private partnership between the U.S. President’s Emergency Plan for AIDS Relief (PEPFAR), the George W. Bush Institute, the Joint United Nations Programme on HIV/AIDS (UNAIDS), Merck, and Roche. The partnership collaborates closely with governments to strategize on ways to provide services for women from prevention through the cancer journey. Go Further began working in eight countries (Botswana, Eswatini, Lesotho, Malawi, Mozambique, Namibia, Zambia, and Zimbabwe), and expanded services to four additional countries (Ethiopia, Kenya, Tanzania, Uganda) in fiscal year (FY) 2021. The objectives are to screen all WLHIV on ART between the ages of 25 and 49 for cervical cancer, and to treat pre-invasive cervical cancer lesions to prevent progression to cervical cancer.

Zimbabwe	Funding Amount	Cervical Cancer Screening Target
FY19	\$4,900,000	100,000
FY20	\$5,482,750	244,297
FY21	\$4,511,918	218,412
FY22	\$4,500,000*	207,977

*Pending Congressional notification and approval

Zimbabwe: Cervical cancer screenings and positives (precancerous lesions or suspected invasive cervical cancer), FY19-FY21

RESULTS SUMMARY

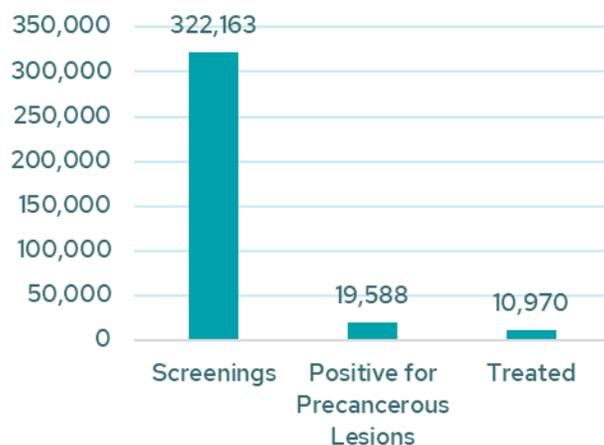

- ◆ In FY21 Q1+Q2: 109,270 screenings were done, representing 50% of the FY21 target; 65% of women who screened positive for precancerous lesions received treatment.
- ◆ Since FY19: 3,112 women have screened positive for suspected invasive cervical cancer. Of the 322,163 screenings, 240,905 (74.8%) were first time screenings, 2,584 (0.8%) were follow-up screenings, and 78,674 (24.4%) were re-screens.

Strategic Direction for FY21

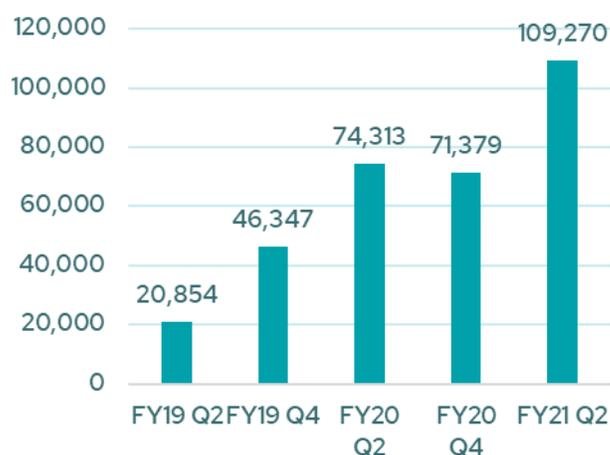

- ◆ Since 2014, the Ministry of Health and Child Care (MoHCC) has been rapidly scaling up screening of cervical cancer using visual inspection with acetic acid and cervicography (VIAC) and over 100 VIAC sites have been set up at district, provincial and central levels countrywide.
- ◆ Procurement of equipment and commodities is ongoing.
- ◆ There has been also recruitment and training of VIAC nurses to work full time in the VIAC clinics. This activity also spearheaded the formation of a cervical cancer monitoring and evaluation technical working group.
- ◆ The national VIAC register and the master MoHCC monthly return were revised to incorporate the PEPFAR VIAC indicators.

Cascade, FY19-FY21 Q2

of Screenings

Implementing Partners (FY21)

- ◆ University of Washington
- ◆ Zimbabwe Association of Church Related Hospital
- ◆ Organization for Public Health Interventions and Development
- ◆ Population Services International (PSI)
